

Finding the right call

Let us assume that:

 You also have decided which type of action you are looking for: RIA, IA, or CSA

Finding the right call

Example:

Imagine...

I am a professor at a university department for software development for cloud applications.

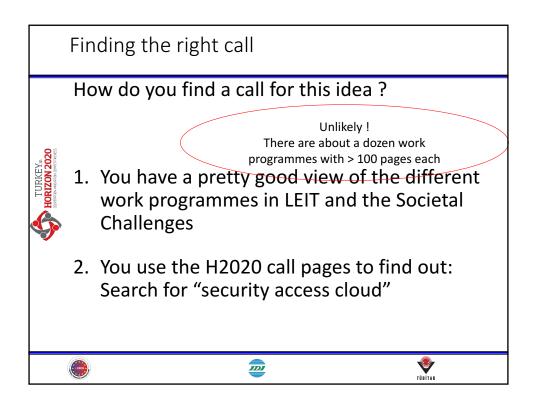

I want to develop a portable device for security clearance in a wide range of application scenarios, usable world-wide and based on secure cloud servers.

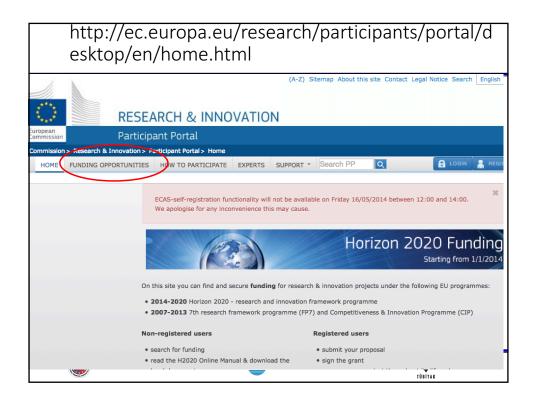

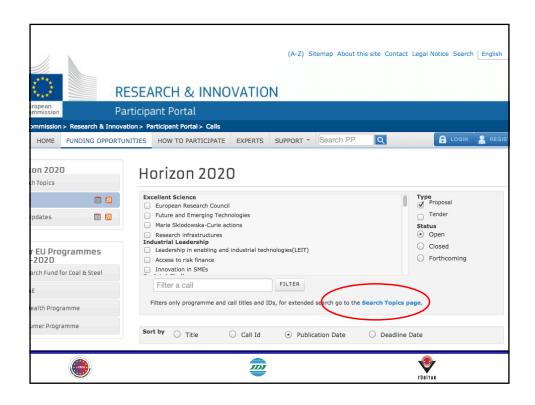

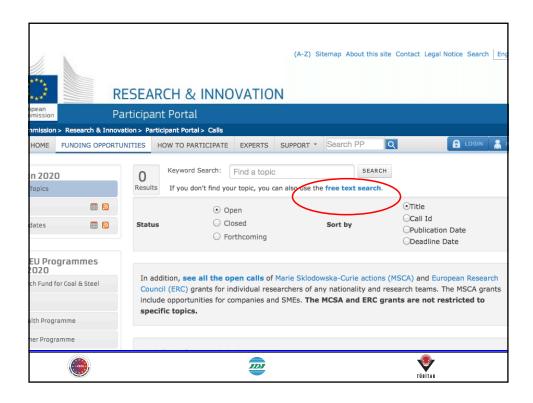

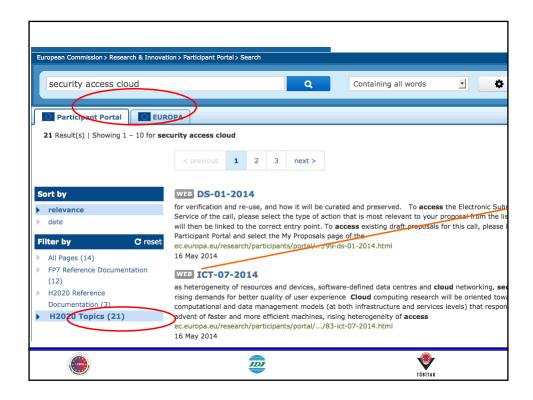

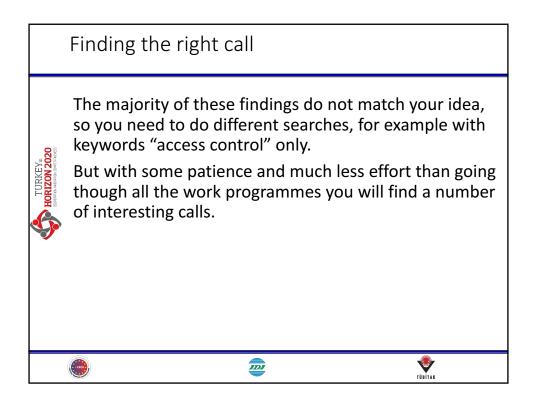

The ICT Workprogramme

- 1. Results found in the ICT programme:
 - Search the LEIT-ICT Workprogramme for 'cloud':

ICT 7 – 2014: Advanced Cloud Infrastructures and Services ICT 8 – 2015: Boosting public sector productivity and innovation through cloud computing services

ICT 9 – 2014: Tools and Methods for Software Development

... and 'security':

EUB 1 – 2015: Cloud Computing, including security aspects

Societal Challenges

2. In the Societal challenges "Secure societies – Protecting freedom and security of Europe and its citizens":

Call – Digital Security: Cybersecurity, Privacy and Trust

DS-1-2014: Privacy

DS-2-2014: Access Control

DS-6-2014: Risk management and assurance models DS-3-2015: The role of ICT in Critical Infrastructure

Protection

DS-4-2015: Secure Information Sharing

DS-5-2015: Trust eServices Let's look at DS-2-2014: Access Control

... the best match

"DS-2-2014: Access Control" seems to fit best.

The call is for "Innovation Actions"

Funding between €3m and €8m EURO

TUR HORIZO

The next steps are now:

- Analyse the text, breaking it down to the main elements
- 2. Group these elements into workpackages
- 3. Identify profiles of the other partners you will need to team up with

The SCOPE

The focus is on the development and testing of usable, economic and privacy preserving access control platforms based on the use of biometrics, smart cards, or other devices.

The solutions are to be installed and tested in a broad-band network, giving access to smart services running over networks with state-of-the-art security, avoiding single points of failure.

Proposed work should include the management of the access rights in particular for the service providers, ensure the security and privacy of the databases, facilitate a timely breach notification and remediation to the user, and reduce the insider threat.

The proposed solutions have to guarantee interoperability and portability between systems and services, sparing the user to have to install a platform, service or country specific technology.

Proposed work could assist the objective of implementing a secure information sharing network.

Proposed work should include the management of the access rights in particular for the service providers, ensure the security and privacy of the databases, facilitate a timely breach notification and remediation to the user, and reduce the insider threat.

The proposed solutions have to guarantee interoperability and portability between systems and services, sparing the user to have to install a platform, service or country specific technology.

Proposed work could assist the objective of implementing a secure information sharing network.

The EXPECTED IMPACT

Expected Impact:

TURKEY HORIZON 2

Actions supported under this objective will deliver secure, but user-friendly, access to ICT systems, services and infrastructures, resulting in a consumerisation of devices or access control.

The level of security of online services and critical infrastructures protected by these access systems should be demonstratably higher than by the state-of-the-art approach.

The proposed solutions are expected to support the creation of commercial services making use of electronic identification and authentication.
