This presentation is for

- Workshop 1** Big Data
- Workshop 3** Photonics and Micro-and-Nanoelectronics
- Workshop 2** Robotics
- Workshop 4** internet of Things

Description of the Organization

PLANET'S R&D project landscape

➤ **PLANET is one of the largest Greek Management and Strategic Consulting companies**

▲ **PLANET has co-ordinated or participated in over 35 RTD projects, funded by the EU's Framework Programmes for Research and Technological Development**

Description of the your research interest

PLANET SA focus on:

- ◆ Development of innovative **methods, scenarios and models** that anticipate and shape the future evolution of the information society.
- ◆ **Evaluation** and **validation** of advanced technological solutions in real business/organisational settings.
- ◆ Development of **market studies** and **business plans** for the future exploitation and deployment of RTD results.
- ◆ Support to EU RTD **international cooperation policy development** e.g. through the determination of research priorities for non EU countries.
- ◆ Provision of **training and support** to users of RTD results and newcomers (e.g. research actors in third countries) in the Framework Programmes.

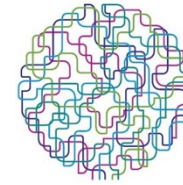

Our Role in a project:

- Based on our experience in particular in evaluation and validation of advanced technological solutions in real business/organisational settings, PLANET wants to play a leading role in:
 - verification and testing of specific IoT approaches, and
 - developing business plans based on the usage scenarios with the project.
- Special emphasis will be on security and privacy elements, where current solutions still have a significant deficit.

Our contribution to the expected results:

- Support emergence of an open market of services and innovative businesses
- Contribution to emerging or future standards and pre-normative activities

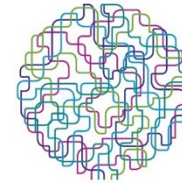

Consortium - profile of known partners

ICTURKEY
