

«FOCUSED GROUP TRAINING ON H2020 Digital Health Call topic»

20-21 February 2020, Ankara

9:00-17:00

Caterina Buonocore,

APRE, NCP for Societal Challenge 1, INFRA, Joint Research Centre .

- Session 1:
 - Introduction to the calls and background policy documents
 - Relevant EU initiatives

Session 2:

- Key actors, successful applicants in H2020 Health.
- Evaluation process

National Contact Points for Horizon 2020

The network of National Contact Points (NCPs) is the main structure to provide guidance, practical information and assistance on all aspects of participation in Horizon 2020. NCPs are also established in many non-EU and non-associated countries ("third countries").

NCP Services

In general, the following basic services are available in accordance with the **NCP Guiding Principles** agreed by all countries:

- Guidance on choosing relevant H2020 topics and types of action
- Advice on administrative procedures and contractual issues
- Training and assistance on proposal writing
- Distribution of documentation (forms, guidelines, manuals etc.)
- Assistance in partner search

As the NCPs are national structures, the type and level of services offered may differ from country to country.

Policy – Digital Health

- **Multidisciplinary technologies** and solutions in health and care with a focus on cybersecurity
- **Secure and user-driven ICT-based solutions** in early risk detection and interventions
- **Aggregation of a variety** of new and existing data sources

FOCUS AREAS

- Digitising and transforming European industry and services
- Boosting the effectiveness of the Security Union

POLICY DRIVERS :

[Connected Digital Single Market](#)

Big Data in healthcare

[European Data Protection Regulation](#)

H2020 – 3 Pillars

Excellent Science

- **European Research Council**
 - Frontier research by the best individual teams
- **Future and Emerging Technologies**
 - Collaborative research to open new fields of innovation
- **Marie Skłodowska Curie actions**
 - Opportunities for training and career development
- **Research infrastructures** (including e-infrastructure)
 - Ensuring access to world-class facilities

Industrial Technologies

- **Leadership in enabling and industrial technologies**
 - ICT, nanotechnologies, materials, biotechnology, manufacturing, space
- **Access to risk finance**
 - Leveraging private finance and venture capital for research and innovation
- **Innovation in SMEs**
 - Fostering all forms of innovation in all types of SMEs

Societal Challenges

- **Health, demographic change and wellbeing**
- Food security, sustainable agriculture, marine and maritime research & the bioeconomy
- Secure, clean and efficient energy
- Smart, green and integrated transport
- Climate action, resource efficiency and raw materials
- Inclusive, innovative and reflective societies
- Secure societies

The smart hospital

- *Digital, safe and efficient*

The Power of Knowing

- *The new power of digital diagnostic*

Digital Single Market Strategy

- **Digital health and care transformation was included as part of the *Digital Single Market mid-term review* (adopted 10 May 2017).** The DSM proposal aims to ensure that the digitisation in health and care will benefit EU citizens (providing them with better treatment, prevention and early diagnosis of diseases) and deliver more sustainable health and care systems across the Union.

Digital Single Market Strategy

Digital Transformation of health and care (3 pillars)

- ***Citizen's secure access to and use of health data***
- ***Advancing research, disease prevention and personalised medicine***
- ***Citizen empowerment and patient-centred care***

The Commission will adopt a Communication in 2017 addressing the need and scope for further measures in the area of digital health and care, in line with legislation on the protection of personal data, patient rights and electronic identification, in particular as regards:

- *citizens' secure access to electronic health records and the possibility to share it across borders and the use of e-prescriptions.*
- *supporting data infrastructure, to advance research, disease prevention and personalised health and care in key areas including rare, infectious and complex diseases.*
- *facilitating feedback and interaction between patients and healthcare providers, to support prevention and citizen empowerment as well as quality and patient-centred care, focussing on chronic diseases and on a better understanding of the outcomes of healthcare systems.*

Digital transformation in Health and Care in Work Programme 2018–2020 (I)

- **DTH-03-2018: Adaptive smart working and living environments supporting active and healthy ageing**
- **DTH-07-2018: Exploiting the full potential of in-silico medicine research for personalised diagnostics and therapies in cloud-based environments**
- **DTH-08-2018: Prototyping a European interoperable Electronic Health Record (EHR) exchange**
- DTH-01-2019: Big data and Artificial Intelligence for monitoring health status and quality of life after the cancer treatment
- DTH-05-2019: Large scale implementation of digital innovation for health and care in an ageing society
- DTH-09-2019: Scaling up the univocal Identification of Medicinal Products
- **DTH-10-2019: Digital health and care services**
- DTH-11-2019: Large Scale pilots of personalised & outcome based integrated care

Digital transformation in Health and Care in Work Programme 2018–2019 (II)

Coordination and support actions

- HCC-01-2018: Supporting investment in smart living environments for ageing well through certification
- HCC-03-2018: Support to further development of international cooperation in digital transformation of health and care
- HCC-04-2018: Digital health and care services – support for strategy and (early) adoption
- HCC-05-2018: Support to a Digital Health and Care Innovation initiative in the context of Digital Single Market strategy
- HCC-02-2019: Support for the large scale uptake of open service platforms in the Active and Healthy Ageing domain

SC1-DTH-03-2018: Adaptive smart working and living environments supporting AHA

Challenge:

- Demographic change and ageing create new challenges for age-friendly living and working environments
- Digital solutions can support older individuals in being and staying actively involved in professional life for longer by designing fit for purpose working environments and by enabling flexible management of job

SC1-DTH-03-2018: Adaptive smart working and living environments supporting AHA

Scope:

- Develop and validate digitally enabled adaptive services and solutions leading to smart working and living environments for older adults
- Support older adults to remain actively involved in professional life, helping them to sustain and renew their work and personal life related skills and support independent active and healthy lifestyles while taking into account reduced capabilities due to age-related health risks and conditions
- Unobtrusive and addressing the needs of employees in specific and various sectors and workplaces
- Build on active user engagement and aimed at realistic and verifiable benefits for flexible and sustainable job longevity measures
- Validation should take place in real settings (at workplaces and at home as required)
- Inclusion of the necessary stakeholders to validate all relevant issues
- Attention theft and impeding physical activity by ICT should be avoided

SC1-DTH-03-2018: Adaptive smart working and living environments supporting AHA

Impact:

Proposals should present methodologies and metrics as appropriate for measuring progress with significance towards the expected impact in:

- Independent living, and quality of life of older persons compared to current state of the art, enabling older persons to stay actively involved in work life for longer or return to work after severe disease
- Enhanced health and safety working conditions and quality of life of older persons at work compared to the current situation, enabling older persons to be able to contribute at an appropriate level for a longer period of time
- Evidence of user-centred design and innovation, new intuitive ways of human-computer interaction, and user acceptance;
- Potential cost-effectiveness due to enhanced self-care, life-style, age-friendly and skills conducive work environments and socio-economic benefits
- Competitive advantage for European industry through flexible and sustainable work arrangements for an ageing workforce
- Leadership in ICT

- These objectives implement the EU's commitment at international level and at EU level in particular:
- the [2030 Agenda for Sustainable Development and its Sustainable Development Goals](#),
- the [COP21](#) and the goals of [the Ostrava declaration on environment and health](#),
- the [Digital Single Market](#) (and its relevance for the digital transformation of health and care),
- the new [European One Health Action Plan against Antimicrobial Resistance](#), the [cross-border healthcare directive](#) (and its support to the European Reference Networks),
- the [Commission Communication on upgrading the single market](#) (and its proposed health technology assessments initiative), and
- the [Council Conclusions on Personalised Medicine](#) and [on Pharmaceuticals](#)

SC1-DTH-03-2018: Adaptive smart working and living environments supporting AHA

Deadline and budgets:

- Submission Deadline: 24 April 2018
- Research and Innovation Action
- Budget: 25M € (expected contribution 4-6M € per proposals)

IC-Health - Improving the digital health literacy of European citizens

IC-Health is a project to develop a series of Massive Open Online Courses (MOOCs) to help improve the digital health literacy of European citizens. MOOCs will be developed in eight languages (English, French, Italian, Danish, German, Swedish, Dutch and Spanish). Countries involved in the pilot are Spain, Italy, Belgium, United Kingdom, Netherlands, Sweden, Germany and Denmark.

IC-Health Final Conference

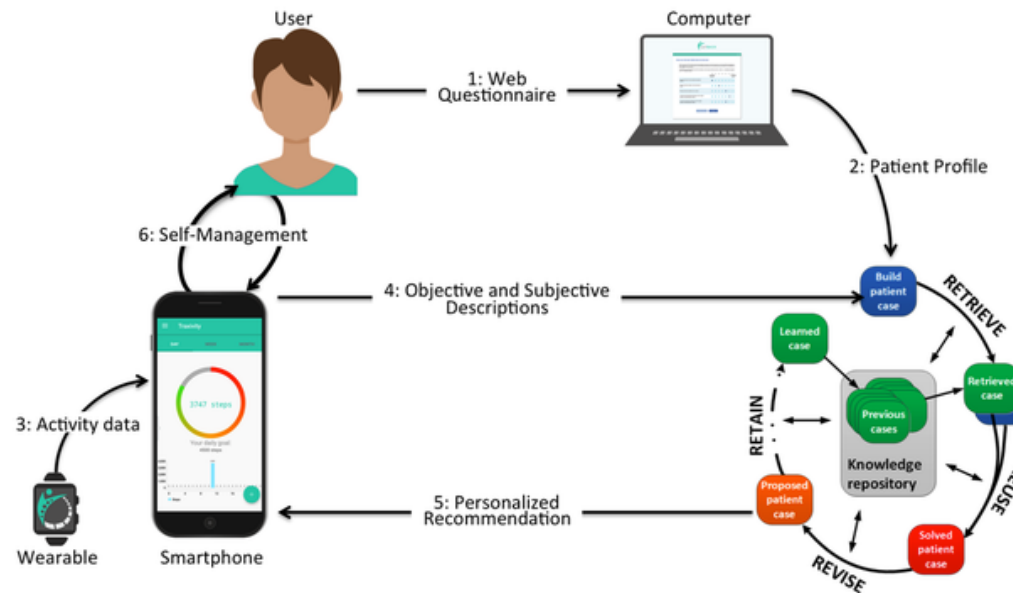

Advancing Proactive Digital Integrated Care

ProACT (Integrated Technology Systems for ProACTIVE Patient Centred Care) is an EU-funded Horizon 2020 project in PHC-25-2015. ProACT targets Europe's 50 million multimorbid patients to proactively self-manage and offset the EU's annual €700 billion cost of chronic disease management. ProACT aims to develop and evaluate an ecosystem to integrate a wide variety of new and existing technologies to improve and advance home-based integrated care for older adults with multimorbidity, including associated co-morbidities.

A decision support system to facilitate, improve and reinforce self-management of non-specific low back pain

Objective

Older adults typically prefer living at their homes as long as possible. However, they often need to be institutionalized due to the age related problems. Homecare can benefit today from a range of existing technologies including smartphones, sensors, etc., however, their effectiveness is limited by the sense of fear and uncomfortableness that many older adults feel. Most current technologies, in fact, are often not designed for older adults, least of all for users with memory impairments. The derivative limitations become a major barrier, severely limiting use of technological assistance in a home environment. CAPTAIN proposes a “transparent” technology designed to turn the home of the older adult into a ubiquitous assistant specifically designed to compensate for their physical and memory impairments during their daily living. To do so, it leverages on a few state of the art technologies, as follows: “Projected augmented reality” to project, through use of micro-projectors, contextualised (directly on walls, floor, tables, etc.) information and instructions on top of the real environment. Real-time 3D sensing technologies to comprehend the “indoor space” (nature and position of objects and actions of the persons) and to allow transforming it into a ubiquitous tangible interface. 3D sensing, together with speech analysis, will allow device-free comprehension of the environment and of the behaviour of the adults (including its changes). Non-invasive physiological and emotional data analysis from facial micro-expressions and human body pose thanks to scalable, robust, and accurate deep learning and artificial intelligence. The coach will leverage on a motivational engine to promote correct nutrition, physical activity, cognitive and physical training, risk avoidance, and social participation. To achieve this CAPTAIN will foster a truly user-centered co-design philosophy -based on constant involvement of older adult in the design, development, and testing stages.

The Horizon Dashboard is an intuitive and interactive reporting platform, composed of a set of sheets that allows series of views to discover and filter the Horizon 2020 data.

The aim of the Horizon Dashboard is to facilitate data sharing, providing public access to real-time programme data in an easy, flexible and user-friendly manner.

The Horizon Dashboard offers:

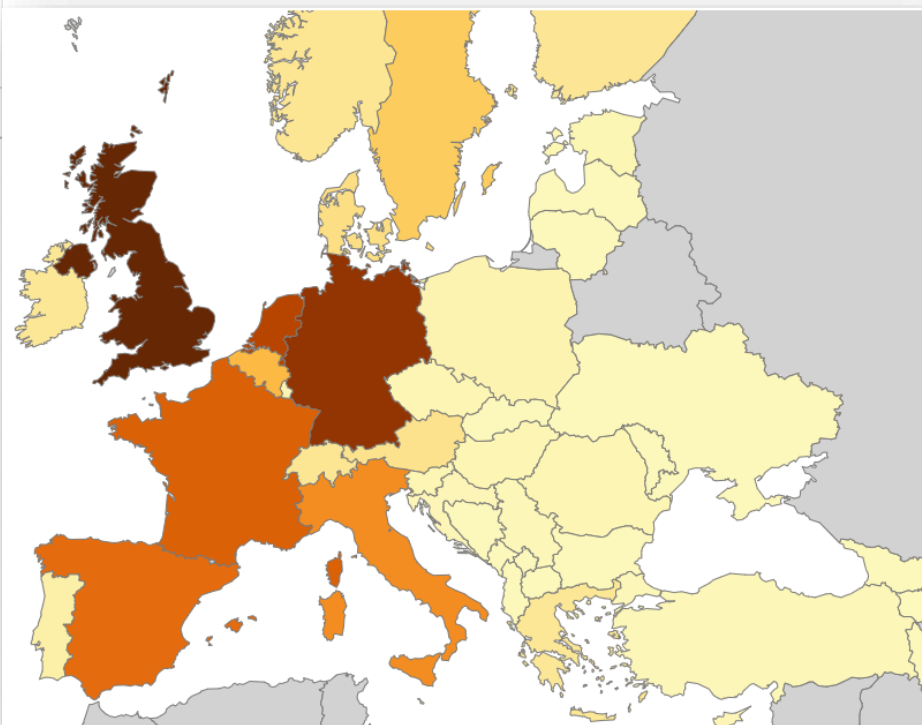

- An accessible, user friendly, open to the public reference for the H2020 implementation data
- Regularly updated data on H2020 proposals, projects and participants
- Fit-for-purpose filter options including thematic, geographical and regional views
- Powerful analytical functions
- Rich and instant data visualisation with multiple attractive maps and graphs which can be extracted for re-use
- Tailor-made statistics according to your needs
