## Generalized Product Life Cycle

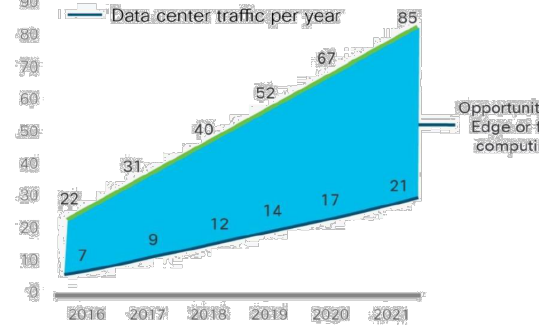

Consumption [TWh/a]

Metric	Description	Formula	Unit/Range	Optimal Value	Source
Power Usage Effectiveness - PUE	% of energy spent powering ancillary equipment	$\frac{\text{Total Facility Energy}}{\text{IT Equipment Energy}}$	N/A 1 < PUE	As close to 1 as possible	EN 50600-4-2; ISO/IEC 30134-2
Renewable Energy Factor - REF	% of renewable energy over total DC energy	$\frac{\text{RE owned \& controlled by DC}}{\text{Total Facility Energy}}$	N/A 0 ≤ REF ≤ 1	1 = DC powered 100% by RE	EN 50600-4-3; ISO/IEC 30134-3
Energy Reuse Factor - ERF	% of energy exported for reuse outside of DC	$\frac{\text{Reuse X Source Factor}}{\text{Total Facility Energy}}$	N/A 0 ≤ ERF ≤ 1	1 = all energy is being reused	ISO/IEC 30134-6; Cluster
Primary Energy Savings - PES	% of savings in terms of primary energy associated with DC operations	$1 - \frac{PE_{\text{current}, \Delta t}^3}{PE_{\text{baseline, adjusted}, \Delta t}^4}$	N/A 0 ≤ PES < 1	As close to 1 as possible	Cluster
CO2 Savings	% of savings in terms of CO2 emissions associated with DC operations	$1 - \frac{CO2_{\text{current}, \Delta t}^5}{CO2_{\text{baseline, adjusted}, \Delta t}^6}$	N/A 0 ≤ CO2 Savings < 1	As close to 1 as possible	Cluster

**Edge computing use cases**

- Precision air cooling
- Basic room-level cooling
- Liquid-based cooling

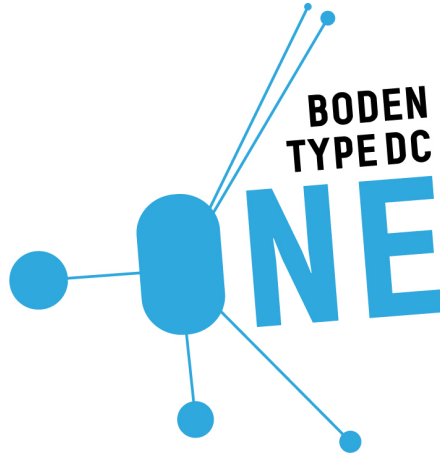

What is the overall average server rack density (kW/rack) deployed in your organization's data center(s)? Choose one.

## JRC TECHNICAL REPORT

# 2021 Best Practice Guidelines for the EU Code of Conduct on Data Centre Energy Efficiency

EUROPEAN COMMISSION

## Energy Efficiency in Industrial Processes

11-12/04/2019

## LC-SC3-B4E-5-2020: Integrated design concepts for energy-efficient ICT in buildings

Specific Challenge: The demand for data processing is expected to grow in the coming years. Consolidation is quickly replacing a multitude of small, remote and inefficient data centres with big and more resource and energy efficient data centres. This tendency however does not address specific delay- and security-sensitive small data centres. Moreover the emergence of edge computing, Internet of Things and Software Defined Networks (Network Function Virtualisation) will increase the amount of small data centres at the edge of the network. This is also the situation for server rooms in buildings.

These server rooms, **small data centres** or other ICT equipment in building (e.g. Telephone cabinets) **should become more energy efficient, better integrated with the buildings in which they operate, and should maximise where possible the integration of intermittent renewable energy sources, district cooling systems, and synergies with buildings' energy management systems (e.g. space heating and cooling).**

Scope: Proposals should **investigate innovative design concepts and advanced ICT solutions for integrated design of server rooms and small data centres in buildings** (based on state-ofPart 10 - Page 65 of 325 the-art sustainable data centre designs such as the Open Compute Project or similar), covering as many as possible of the following areas:

- **Optimal energy performance** of the proposed design concepts,
- **Innovative and energy efficient cooling technologies and/or solutions,**
- **Integration with buildings' energy management system and energy-consuming systems** (using European and global communication standards such as SAREF), taking into account building usage,
- **Integration with intermittent renewable energy sources,**
- **Waste heat valorisation** (e.g. recovery, conversion, usage in local low-temperature heat networks to serve urban areas), while minimising the total waste heat production,
- **Geographical and temporal workload balance,**
- **Elimination of unnecessary repeated power conversions (AC/DC),**
- **Operation of ICT equipment in a wider range of temperatures** (to mitigate cooling and airflow needs in data centres but also heating needs in telecommunication cabinets/booths in the field).

# Focus Group Training on Energy

## 29-30/05/2019

How to engage with SC3 key actors

I want to promote my skills and be a partner of a proposal  
 2. Attend to the H2020 EU Energy Info days - Use it for networking

**Horizon 2020 Energy Info Days: 25-27 June 2019, Brussels**

Interested in funding opportunities for research, innovation and market uptake projects on clean energy? Then make it your chance to meet the world's leading clean energy experts and network with them in Brussels. Energy efficiency can also be discussed in EU State-of-the-Art reports.

**#H2020Energy Info Days**

25-27 June 2019  
 BRUSSELS

Dates	Tuesday 25 June, 2019 - 09:00 to Thursday 27 June, 2019 - 18:00
Section	Horizon 2020 Energy & Climate
Location	Chamberlayne building, Free 10

# OCP Regional Summit 2019 Participation

## 26-27/09/2019

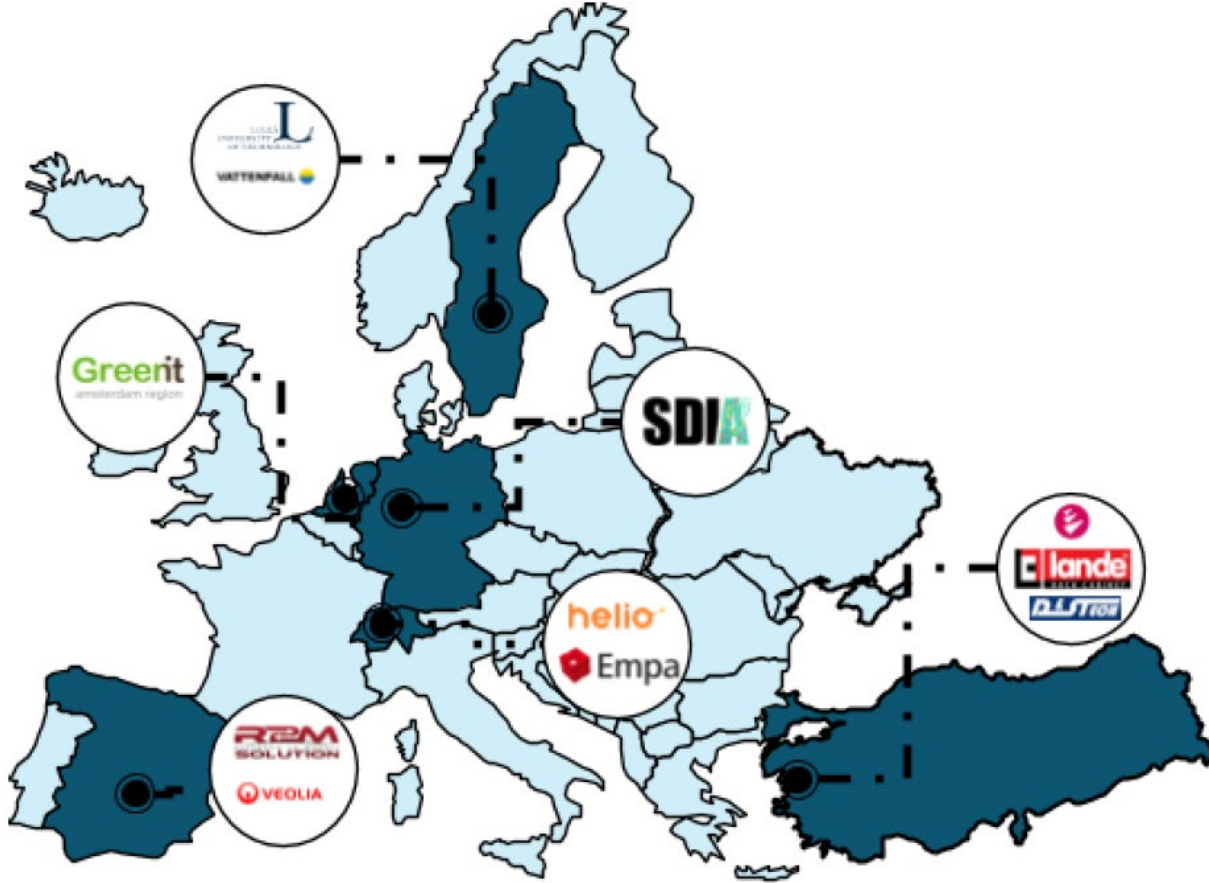

## Application Guide for TUBITAK Coordinators Support Programme

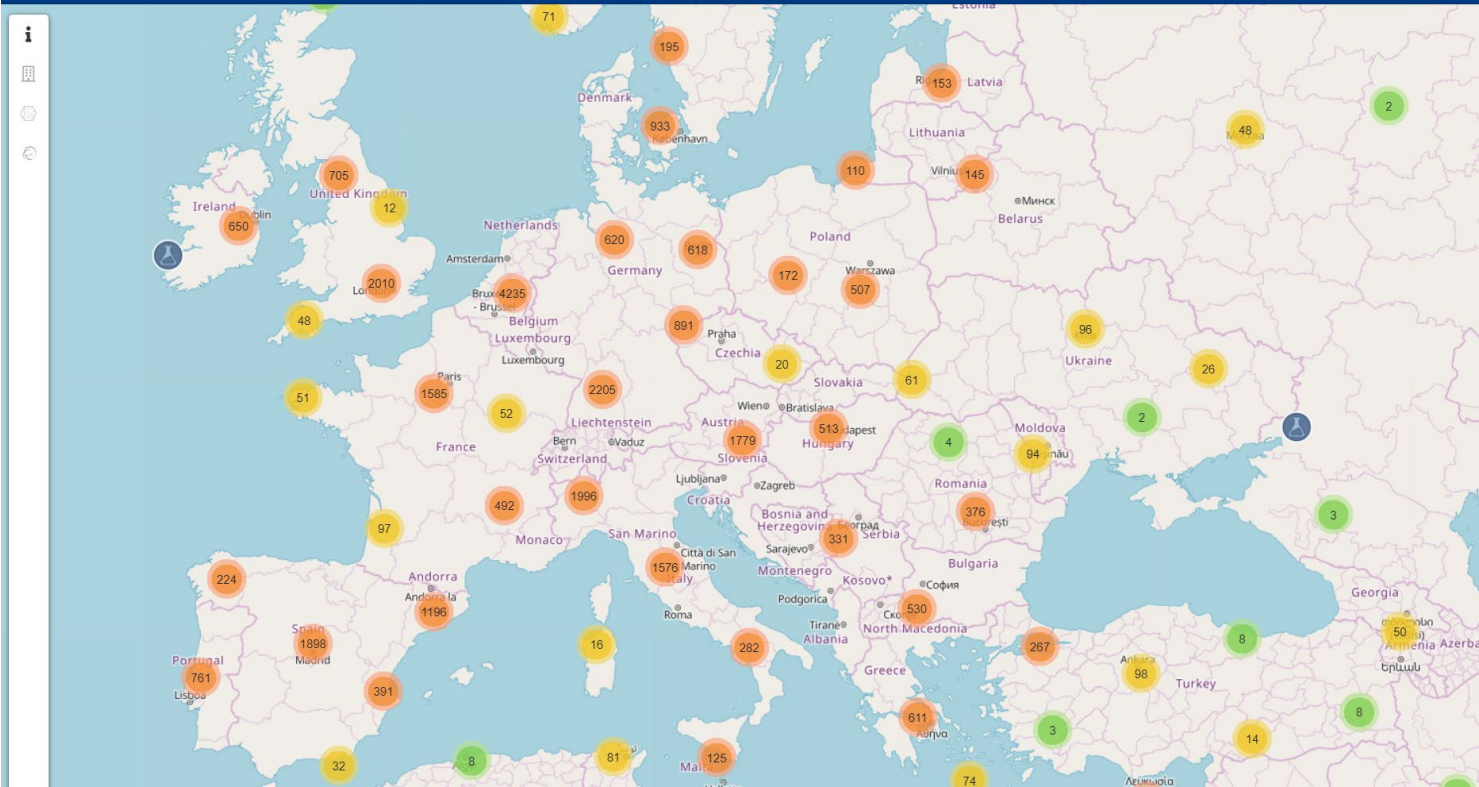

Incentive Program for ‘EU FP Coordinators’, has been established by TUBITAK for encouraging Turkish Institutions to lead consortia in projects submitted under EU FP Calls and increasing the success rate of them in European Union Framework Programme (EU FP).

The coordinators, who wish to apply for the supports, first have to go through “General Application” process.

Metric	Description	Formula	Unit / Range	Optimal Value	Source
Power Usage Effectiveness – PUE	% of energy spent powering ancillary equipment	$\frac{\text{Total Facility Energy}}{\text{IT Equipment Energy}}$	N/A 1<PUE	As close to 1 as possible	EN 50600-4-2; ISO/IEC 30134-2
Renewable Energy Factor – REF	% of renewable energy over total DC energy	$\frac{\text{RE owned \& controlled by DC}}{\text{Total Facility Energy}}$	N/A 0≤REF≤ 1	1 = DC powered 100% by RE	EN 50600-4-3; ISO/IEC 30134-3
Energy Reuse Factor – ERF	% of energy exported for reuse outside of DC	$\frac{\text{Reuse X SourceFactor}}{\text{Total Facility Energy}}$	N/A 0≤ERF≤ 1	1 = all energy is being reused	ISO/IEC 30134-6; Cluster

Proposal Evaluation Form		
	<b>EUROPEAN COMMISSION</b> Horizon 2020 - Research and Innovation Framework Programme	<b>Evaluation Summary Report - Innovation actions</b>

### Evaluation Summary Report

#### Evaluation Result

Total score: 14.00 (Threshold: 12)

***The proposal describes the current state of the art very well** and convincingly demonstrates how it goes beyond it. TRL levels for each subsystem are described and the proposal systematically shows how the project brings them to TRL7/8 in a convincing manner.*

***The data-driven approach to energy performance improvement is novel and has the potential to be widely applicable and scalable to other DCs.***

***The zonal heat management system** (with real time measurement and Artificial Intelligence (AI) analytics) will support improved workload orchestration and extend heat management in DCs **beyond the current state of the art**. This approach is novel in terms of further cost optimisation.*

*The proposal can be expected to provide useful open source data that can serve as evidence for future European policies.*

## Q&A

Time to ask your  
questions!

Teşekkür ederim!

Thank you!
