Description of the Organization

CO-CREATION + SMART DATA FOR CITIZEN INTELLIGENCE

- FANVOICE is a citizen participatory and engagement platform that helps public and private entities to build better products / services / policy decisions, and improve user experience through **co-creation**.
- FANVOICE connects people and organization through **communities**, in massive online brainstorming.
- With the platform, you can easily :
 - **Build a citizen community and ask their feedbacks**
 - **Engage citizens** as social innovators throughout the innovation life cycle
 - Manage different types of **participatory processes**, from ideation, deliberation, public policy design, co-creation, beta-test, product testing, service experimentation...

Description of your research interest

- Our IA semantic engine can automatically analyze large volume of citizen feedbacks, turn it into statistics and set a **2D insight map** to help visualize and explore the data.
- We especially work on NLP algorithm (Natural Language Processing) in order to improve the accuracy of the automatic analysis.
- We propose to provide this IA semantic engine to help any project / consortium to easily analyze citizens feedbacks and easily understand citizens needs and expectations.

CROWD Prediction is familiar with European project call and has already participated in more than 10 EU R&D consortium (either coordinator or partner).

We are currently involved in 3 consortium for Horizon Europe including one for HORIZON-CL5-2021-D2-01-12: Fostering a just transition in Europe

Project Idea

Fanvoice's platform could be useful by any consortium which aim to involve **citizens to get their feedbacks, engage them in participatory processes (ideation, co-creation, etc), and/or involve them to test and experiment new products / services or policies.**

We have a special interest for *HORIZON-CL5-2022-D3-01-08: Supporting the action of consumers in the energy market and guide them to act as prosumers, communities and other active forms of active participation in the energy activities.*

Indeed, Fanvoice platform is ideal to link citizen, technologies, regulation and markets together.

For this specific call, we are building a consortium and we are looking for a coordinator.
