Istanbul, 12 October 2022

Horizon Europe - Session 2: Enhancing Turkish Participation in the Built4People Partnership a. Practical aspects of proposal preparation

Few Essentials About HE Calls (collaborative projects)

Bu proje Avrupa Birliği ve Türkiye Cumhuriyeti tarafından finanse edilmektedir
This project is co-funded by the European Union and the Republic of Türkiye

- Focus on the what matters – no need to become a master in HE
- Scan relevant [funding opportunities](#)
- Understand the topic and work programme (info-days, FAQs, reports, etc.)
- Interpret the topic and transform initial ideas into winning proposals
- Be ambitious and convincing at the same time
- Be realistic: know your strengths (who you are) ...
and your weaknesses (who you are not)
- It is not a trivial process - At any point one may get 'lost in translation'

Proposal Development - No Standard Formula

Bu proje Avrupa Birliği ve Türkiye Cumhuriyeti tarafından finanse edilmektedir
This project is co-funded by the European Union and the Republic of Türkiye

- Start with the **understanding of state of art** i.e. what already exists
- Identify and analyse the **innovation potential**
- Formulate the **concept** and real-world validation scenarios or **use-cases**
- Identify necessary **roles** and **partner types** needed to realise the concept and use-cases
- **Develop the concept and approach** in a collaborative environment with partners
- Develop work program with core activities under **WPs** and their breakdown under **tasks**
- **Fill in the proposal template** to provide necessary details in the given structure
- **Allocate effort and budget** to partners in a transparent and mutually agreed approach
- Fill in the necessary **details on the EC Portal** and submit the proposal

Typical Lifecycle of Research Proposals

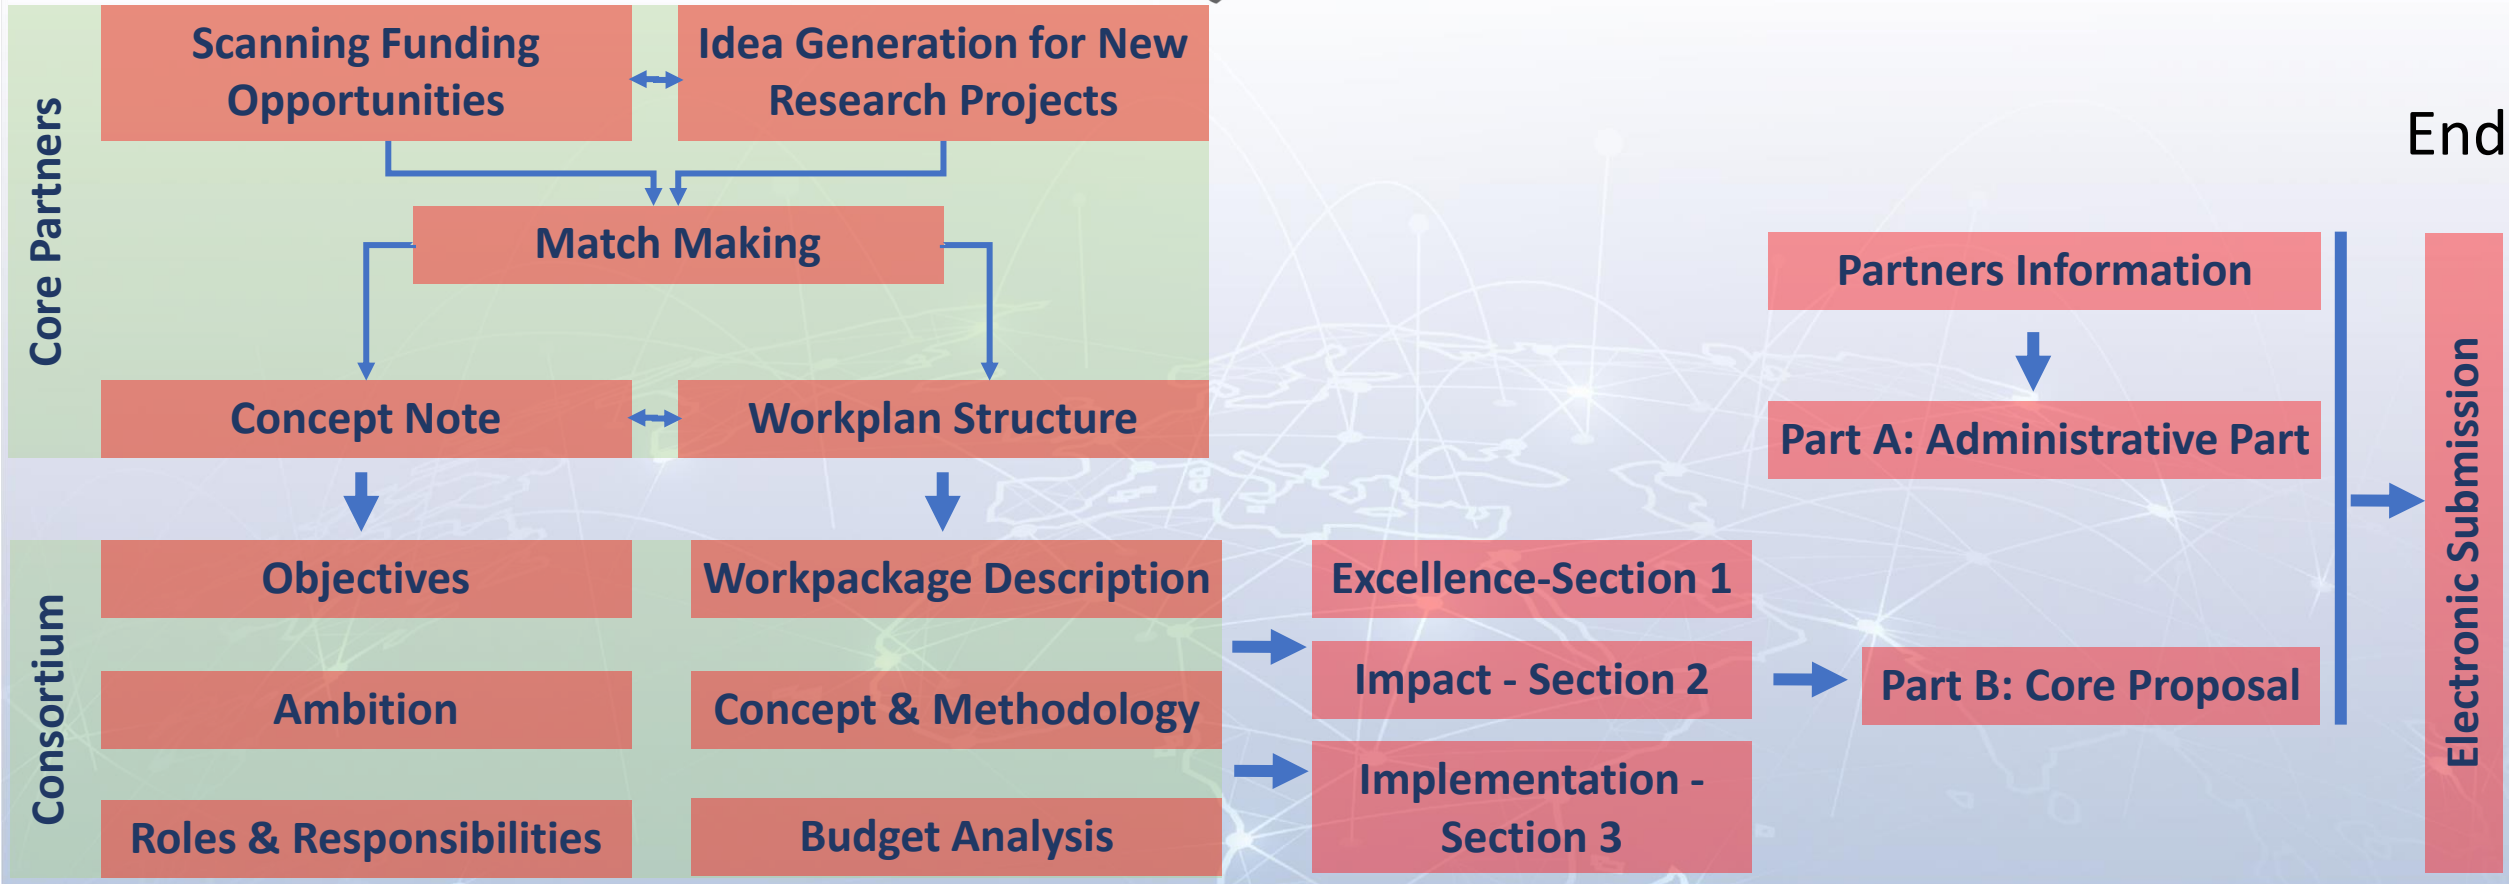

Bu proje Avrupa Birliği ve Türkiye Cumhuriyeti tarafından finanse edilmektedir
This project is co-funded by the European Union and the Republic of Türkiye

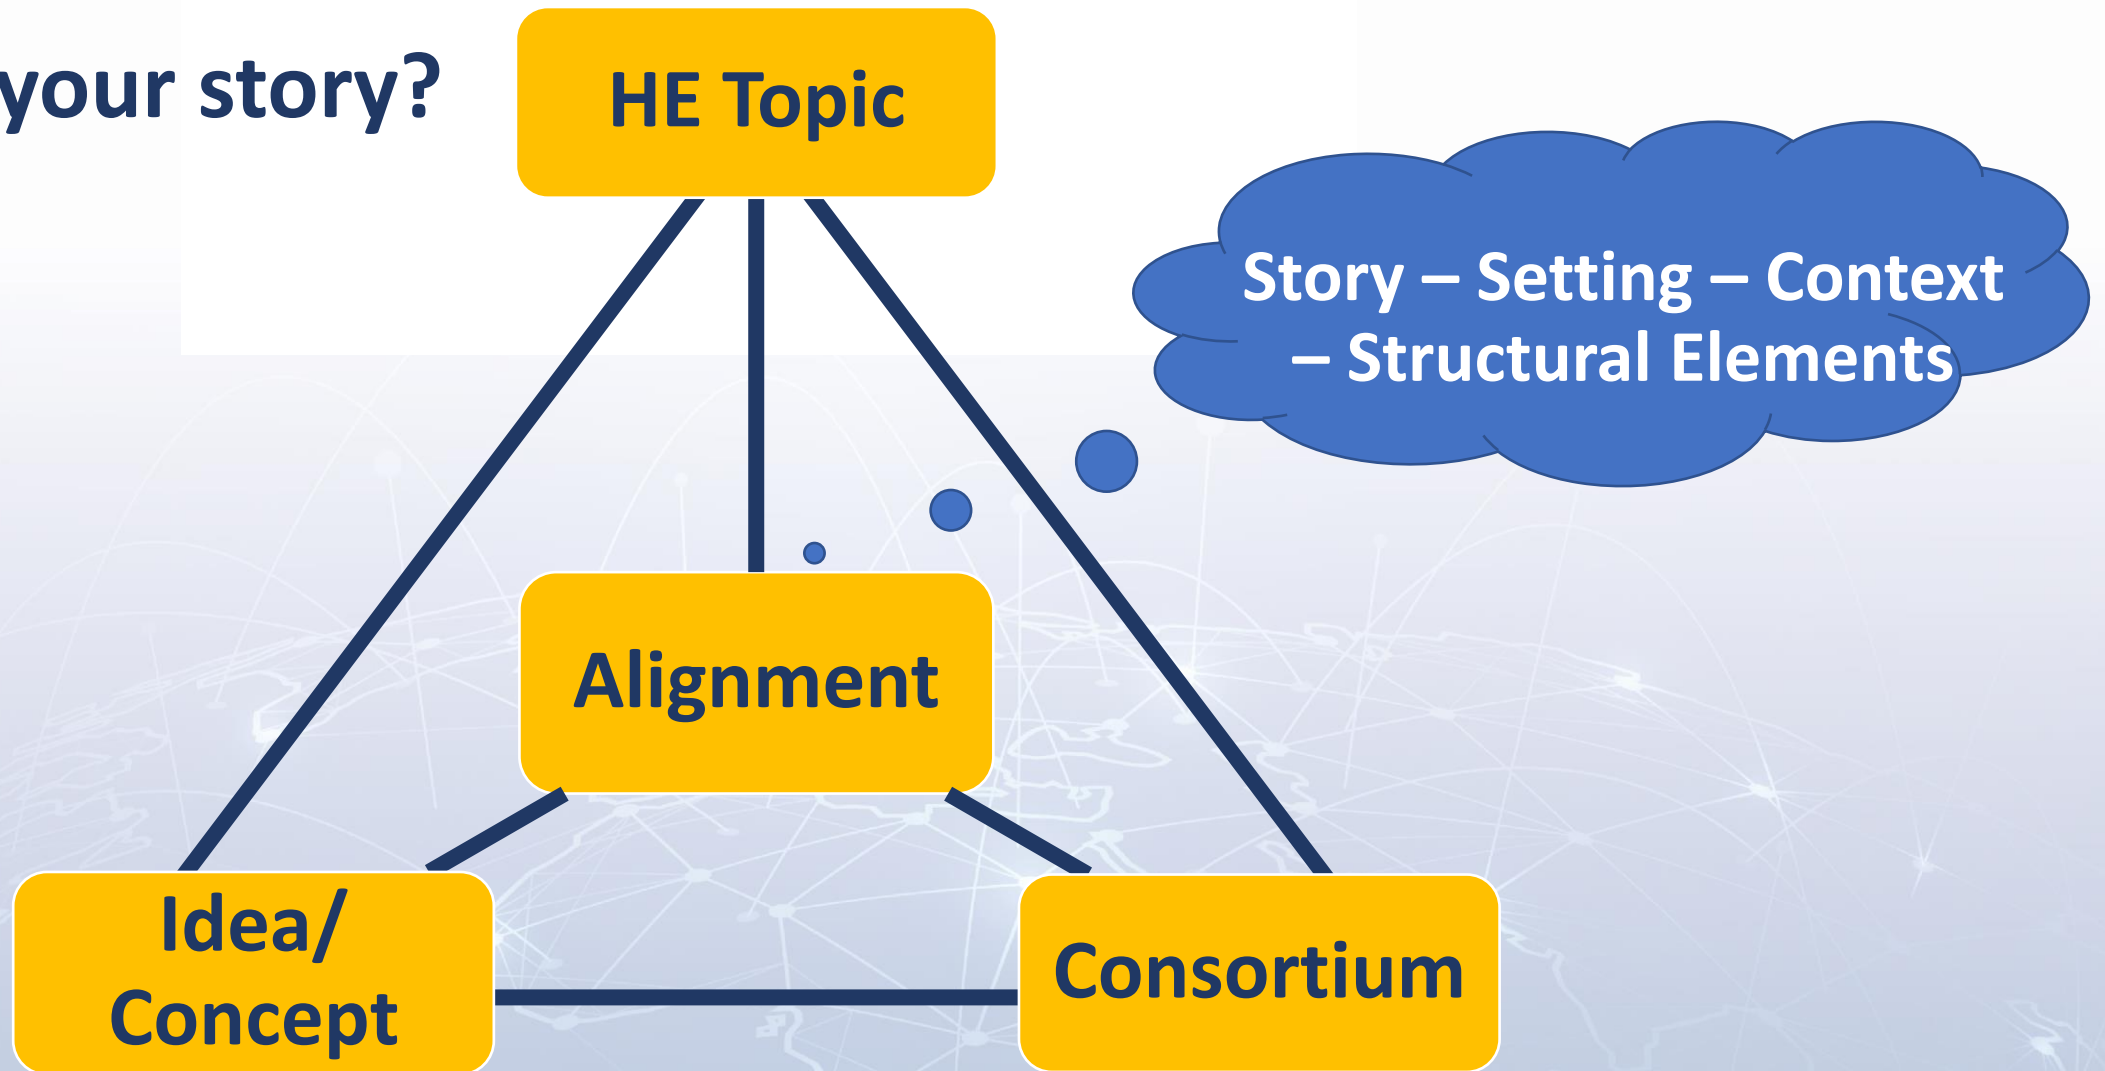

Start

End

What is your story?

Participation strategy: Building Consortia

Bu proje Avrupa Birliği ve Türkiye Cumhuriyeti tarafından finanse edilmektedir
This project is co-funded by the European Union and the Republic of Türkiye

- Clarifying problem, proposed solution, state-of-art and innovation potential
- Identifying key partner needs, roles and responsibilities
 - Who do you need to deliver the proposed project?
- Matching the above with *suitable* candidates

Type	Sector	Expertise	Commitment	Experience	Projects	Country	Rate	...
------	--------	-----------	------------	------------	----------	---------	------	-----

- Identifying competent partners
 - Collaborative network, previous project websites, call pages, info days ...
- Attracting competent partners
 - Clarity of concept and its relevance with the funding call
 - Clarity of value proposition for the partners
 - Clarity of expected contributions
 - *Early bird gets the worm!*

Participation strategy: Joining Consortia

- Understand the need, expected role and responsibility

Its good to be ambitious but not over-committing

- What makes a good partner?

Background	Experience	Expertise	Concreteness	Proactiveness	Responsiveness	...
------------	------------	-----------	--------------	---------------	----------------	-----

- Strategies to identify and join consortia

- Expression of interest on call pages .. highlight the role and contributions
- Attend EC info and networking days
- Discuss innovative ideas and potential contributions in collaborative networks
- Join the relevant communities e.g. BDVA, EFFRA, AI4EU, EFF, LinkedIn ...
- Start early and be consistent in chasing your interests

- Everyone appreciates a helping hand!

Writing Proposal – The Use of Templates

Bu proje Avrupa Birliği ve Türkiye Cumhuriyeti tarafından finanse edilmektedir
This project is co-funded by the European Union and the Republic of Türkiye

- Templates are important – ***not only a technicality***
- HE proposal templates provide overall structural guidelines .. they can be extended and fine-tuned as long as the base structure is adhered
- Trade offs:
 - too (much) scientific
 - too (much) industry
 - too (much) sale pitch
- A good template shall:
 - help all write better proposals and
 - make evaluators' life easier

Proposal Templates & Electronic submission

Bu proje Avrupa Birliği ve Türkiye Cumhuriyeti tarafından finanse edilmektedir
This project is co-funded by the European Union and the Republic of Türkiye

- **Part A** (administrative part)
 - General info (title, duration, keywords, abstract, etc.)
 - Security questionnaire
 - Participants info
 - Budget of the proposal (eligible costs, requested funding)
 - Ethics assessment (optional)
- **Part B** (technical part)
 - Excellence
 - Impact
 - Implementation

The 'easy' part

Electronic proposal submission

- > **Get ECAS account**
- > **Get PIC number -Participant Register (SME status?)**
- > **Launch submission wizard**
- > **Pre-register your draft proposal**
- > **List participants, contact persons**
- > **Fill in Administrative forms**
- > **Upload Technical Annex**
- > **Submit your proposal (modify?)**
- > **Receipt of submission**

HE Proposal Limit (technical part – Part B)

Bu proje Avrupa Birliği ve Türkiye Cumhuriyeti tarafından finanse edilmektedir
This project is co-funded by the European Union and the Republic of Türkiye

- ❖ RIAs: limit for a full application is **45 pages**
- ❖ IAs: limit for a full application can be **70 or 45 pages**
- ❖ CSAs: limit is **30 pages**
- ❖ First stage proposals: limit is **10 pages**
- ❖ EIC Pathfinder: limit is **17 pages**

Exceptions, if any, would be specified in the call text.

Part B Template: Glossary of Terms

- **Critical Risk:** Potential adverse impact on the ability of the project to achieve its objectives
- **Deliverable:** A report that is sent to the Commission to ensure effective monitoring
- **Impacts:** Wider long-term effects on society, economy and science, enabled by the outcomes of R&I investments
- **Milestone:** Control points in the project that help to chart progress
- **Objectives:** goals of the work performed within the project, in terms of its R&I content
- **Outcomes:** expected effects, over the medium term
- **Pathway to impact:** Logical steps towards the achievement of the impacts
- **Research output:** results to which access can be given (publications, etc.)
- **Results:** what is generated during the project implementation (including know-how)

Policy Considerations – Horizontal Issues

Should be Project Specific

- **Open Science** (Data Management Plan for FAIR (Findable, Accessible, Interoperable, Reusable) research data)
- **Gender Dimension** (how gender can influence project activities & vice versa)
- **Pathway to Impact** (steps towards achieving our expected outcomes/ impact)
- **Measures to Maximise Impact** (draft plan for communication, dissemination, exploitation)
- **Artificial Intelligence** (systems to be trustworthy, technically & socially robust, reliable)
- **Do-not-make-harm Principle** (environment): climate change mitigation & adaptation, pollution prevention, circularity, biodiversity, sustainable use of resources)

Research proposal writing is...

Bu proje Avrupa Birliği ve Türkiye Cumhuriyeti tarafından finanse edilmektedir
This project is co-funded by the European Union and the Republic of Türkiye

- A work of art?
- Science / engineering?

-> Both!

Proposal Templates: PART B - RIA example

1 EXCELLENCE

1.1 OBJECTIVES AND AMBITION

Rationale & Background

Overall aim and Key Objectives

Ambition

1.2 METHODOLOGY

Concept and approach

Overall methodology

Relevant national & international R&I activities linked with the project

Multi/Inter-disciplinary approach

Gender dimension: Diverse and inclusive

Open Science practices

Research data management and management of other research outputs

Compliance with the “Do No Significant Harm Principle”

2 IMPACT

2.1 PATHWAYS TOWARDS IMPACT

Expected Outcomes specified in this topic

Contribution to the Expected Impacts (EI) specified in Destination: ...xxxxx...

Potential impact to the “Do No Significant Harm Principle”

Requirements and potential barriers

2.2 MEASURES TO MAXIMISE IMPACT

Overall Communication, Dissemination and Exploitation (CDE) strategy

Communication and Dissemination strategies and target audiences

Outlined Exploitation strategy

2.3 SUMMARY – KEY ELEMENTS OF THE IMPACT SECTION

3 QUALITY AND EFFICIENCY OF THE IMPLEMENTATION

3.1 WORK PLAN AND RESOURCES

3.1.1 Overall structure of the work plan

3.1.2 Detailed work description

3.1.3 Resources to be committed

3.2 CAPACITY OF PARTICIPANTS AND CONSORTIUM AS A WHOLE

Consortium as a whole

Organisational Structure and decision-making

Partner’s main role and contribution to the project

Complementarity between participants

Access to critical infrastructure

Description of the industrial /commercial involvement

Other countries and international organisations

2. Proposal Templates: PART B – RIA/IA Example

Bu proje Avrupa Birliği ve Türkiye Cumhuriyeti tarafından finanse edilmektedir
This project is co-funded by the European Union and the Republic of Türkiye

1 EXCELLENCE

1.1 OBJECTIVES AND AMBITION

Rationale & Background

Overall aim and Key Objectives

Ambition

1.2 METHODOLOGY

Concept and approach

Overall methodology

Relevant national & international R&I activities linked with the project

Multi/Inter-disciplinary approach

Gender dimension: Diverse and inclusive

Open Science practices

Research data management and management of other research outputs

Compliance with the “Do No Significant Harm Principle”

2. Proposal Templates: PART B – RIA/IA Example

Bu proje Avrupa Birliği ve Türkiye Cumhuriyeti tarafından finanse edilmektedir
This project is co-funded by the European Union and the Republic of Türkiye

Section 1

- First 2 pages sell the proposal!
- Use figures .. Illustrative scenarios
- Stretch the sections to cover:
 - Technological challenges and Vision
 - Measurable KPIs for objectives
 - Technical architecture
 - Pilot scenarios (current vs envisioned)
 - Methodological challenges
 - Management methodology*

* *There is no other place!*

1 EXCELLENCE

1.1 OBJECTIVES AND AMBITION

Rationale & Background

Overall aim and Key Objectives

Ambition

1.2 METHODOLOGY

Concept and approach

Overall methodology

Relevant national & international R&I activities linked with the project

Section 2

- The impact is generally far greater than end result!
- Stretch the sections to cover:
 - Impact pathways with concrete KPIs
 - Impact towards specific destination
 - Impact towards standardisation
 - Impact towards key target groups
 - CDEs supported by measurable KPIs
 - Competition and Market analysis
 - Identification of KERs

2.1.1 SWOT Analysis	2.1.2 SWOT Analysis
<p>Strengths</p> <ul style="list-style-type: none"> Novelty of the HIEP approach in terms of its knowledge intensive and personalisation features Excellent positions of the consortium in both the AI and ICT areas Strong international exploitation and market uptake potential led by the consortium leader The Solution is based on mature background AI components & technologies of the partners <p>Weaknesses</p> <ul style="list-style-type: none"> Diversity of the partners' strategic goals, operating domains and business models Lack of established presence in the market of AI-based services for personalised Cancer care i.e. need for new start and acquisition of customer Diversity in the products and solutions to be integrated and offered as a single solution <p>Opportunities</p> <ul style="list-style-type: none"> Socio-economic importance of solutions for Cancer Rise of investments in AI-based solutions, which facilitates access to finance for relevant innovators Technology accelerators in the areas of big data, AI, personalised healthcare and emotional intelligence Rising demand for evidence-based clinical solutions to improve and/or reduce costs of care <p>Threats</p> <ul style="list-style-type: none"> Lack of adequate datasets for the development and validation of the project's solutions will be a commercialisation obstacle Emergence of competing solutions and services Inadequacy or slow standardisation of AI solutions for healthcare (e.g. evaluation of the AI as a medical device initiative by FDA) 	<p>2.2 Individual Dissemination Plans</p> <p>ICE is an active member of several European platforms (such as Big Data Value Association, MEDSI, European Factory Foundation) and has active links with others within that are of direct relevance to HIEP, such as FIBRE4, IODEA, DIS and ETIS. Using these links, ICE will provide the HIEP project and its key value proposition around a large number of relevant stakeholders. Dissemination activities will comprise of project presentations, promotion on social media and web, supporting the project webpage and organisation of public events in academic events where ICE frequents.</p>

2.2 SUMMARY – KEY ELEMENTS OF THE IMPACT SECTION
<p>2.2 SUMMARY – KEY ELEMENTS OF THE IMPACT SECTION</p> <p>Expected Outcomes specified in this topic Contribution to the Expected Impacts (EI) specified in Destination: ...xxxxx... Potential impact to the “Do No Significant Harm Principle” Requirements and potential barriers</p> <p>Overall Communication, Dissemination and Exploitation (CDE) strategy Communication and Dissemination strategies and target audiences Outlined Exploitation strategy</p>

Key Exploitable Result (KER)	*Type	Owner(s)	Clients (C), Users (U)	Sales Channels	**Means of Exploitation

3 QUALITY AND EFFICIENCY OF THE IMPLEMENTATION

3.1 WORK PLAN AND RESOURCES

3.1.1 Overall structure of the work plan

3.1.2 Detailed work description

3.1.3 Resources to be committed

3.2 CAPACITY OF PARTICIPANTS AND CONSORTIUM AS A WHOLE

Consortium as a whole

Organisational Structure and decision-making

Partner's main role and contribution to the project

Complementarity between participants

Access to critical infrastructure

Description of the industrial /commercial involvement

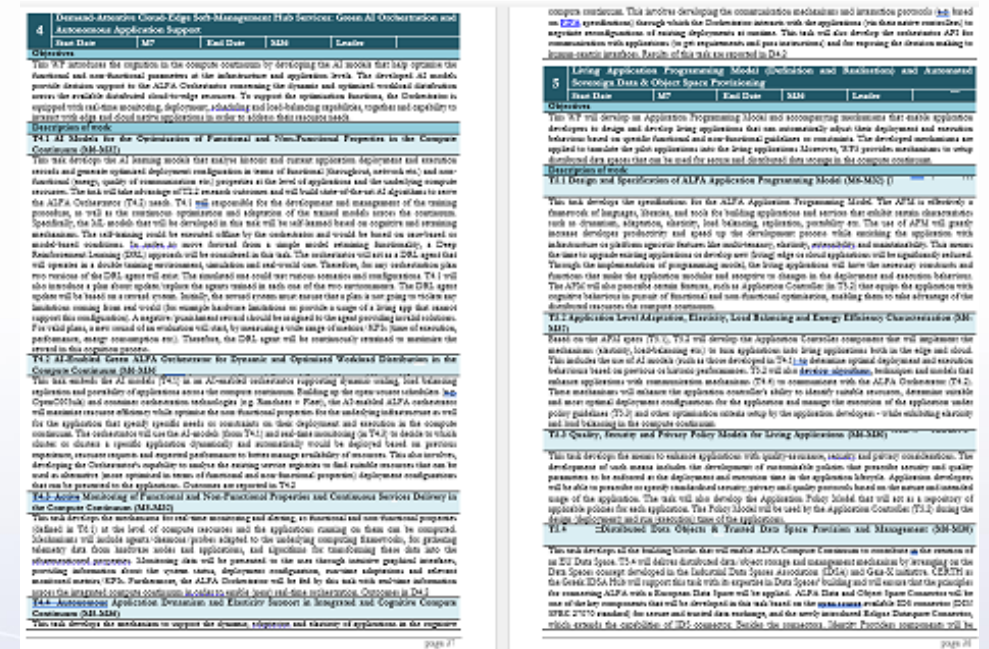

Other countries and international organisations

2. Proposal Templates: PART B – RIA/IA Example

Section 3

- Plans are only good intentions unless they are properly managed!
- Keep it precise and focused!
- Highlight critical risks, impact and mitigations
- Careful with budget calculations when working with international partners

3	QUALITY AND EFFICIENCY OF THE IMPLEMENTATION
3.1	WORK PLAN AND RESOURCES
3.1.1	Overall structure of the work plan
3.1.2	Detailed work description
3.1.3	Resources to be committed
3.2	CAPACITY OF PARTICIPANTS AND CONSORTIUM AS A WHOLE
	Consortium as a whole
	Organisational Structure and decision-making
	Partner's main role and contribution to the project
	Complementarity between participants
	Access to critical infrastructure
	Description of the industrial /commercial involvement
	Other countries and international organisations

The HE Impact Canvas

Bu proje Avrupa Birliği ve Türkiye Cumhuriyeti tarafından finanse edilmektedir
This project is co-funded by the European Union and the Republic of Türkiye

It is meant to be a *summary*

1. Specific needs
2. Expected results
3. D&E&C measures
4. Target groups
5. Outcomes
6. Impacts

HE Impact Canvas: The Basic Notions

Bu proje Avrupa Birliği ve Türkiye Cumhuriyeti tarafından finanse edilmektedir
This project is co-funded by the European Union

Impact Canvas: Template (1/2)

Bu proje Avrupa Birliği ve Türkiye Cumhuriyeti tarafından finanse edilmektedir
This project is co-funded by the European Union and the Republic of Türkiye

SPECIFIC NEEDS

What are the specific needs that triggered this project?

Example 1

Most airports use process flow-oriented models based on static mathematical values limiting the optimal management of passenger flow and hampering the accurate use of the available resources to the actual demand of passengers.

Example 2

Electronic components need to get smaller and lighter to match the expectations of the end-users. At the same time there is a problem of sourcing of raw materials that has an environmental impact.

EXPECTED RESULTS

What do you expect to generate by the end of the project?

Example 1

Successful large-scale demonstrator:

Successful large-scale demonstrator:

Trial with 3 airports of an advanced forecasting system for proactive airport passenger flow management.

Algorithmic model:

Novel algorithmic model for proactive airport passenger flow management.

Example 2

Publication of a **scientific discovery on transparent electronics.**

New product: More sustainable electronic circuits.

Three PhD students trained.

D & E & C MEASURES

What dissemination, exploitation and communication measures will you apply to the results?

Example 1

Exploitation: Patenting the algorithmic model.

Dissemination towards the scientific community and airports: Scientific publication with the results of the large-scale demonstration.

Communication towards citizens: An event in a shopping mall to show how the outcomes of the action are relevant to our everyday lives.

Example 2

Exploitation of the new product: Patenting the new product; Licencing to major electronic companies.

Dissemination towards the scientific community and industry: Participating at conferences; Developing a platform of material compositions for industry; Participation at EC project portfolios to disseminate the results as part of a group and maximise the visibility vis-à-vis companies.

Impact Canvas: Template (2/2)

Bu proje Avrupa Birliği ve Türkiye Cumhuriyeti tarafından finanse edilmektedir
This project is co-funded by the European Union and the Republic of Türkiye

TARGET GROUPS

Who will use or further up-take the results of the project? Who will benefit from the results of the project?

Example 1

9 European airports:

Schiphol, Brussels airport, etc.

The European Union aviation safety agency.

Air passengers (indirect).

Example 2

End-users: consumers of electronic devices.

Major electronic companies: Samsung, Apple, etc.

Scientific community (field of transparent electronics).

OUTCOMES

What change do you expect to see after successful dissemination and exploitation of project results to the target group(s)?

Example 1

Up-take by airports: 9 European airports adopt the advanced forecasting system demonstrated during the project.

Example 2

High use of the scientific discovery published (measured with the relative rate of citation index of project publications).

A major electronic company (Samsung or Apple) **exploits/uses the new product** in their manufacturing.

IMPACTS

What are the expected wider scientific, economic and societal effects of the project contributing to the expected impacts outlined in the respective destination in the work programme?

Example 1

Scientific: New breakthrough scientific discovery on passenger forecast modelling.

Economic: Increased airport efficiency
Size: 15% increase of maximum passenger capacity in European airports, leading to a 28% reduction in infrastructure expansion costs.

Example 2

Scientific: New breakthrough scientific discovery on transparent electronics.

Economic/Technological: A new market for touch enabled electronic devices.

Societal: Lower climate impact of electronics manufacturing (including through material sourcing and waste management).

Impact Canvas: Sample

This project is co-funded by the European Union and the Republic of Türkiye

2.3 Summary of Impact Actions

Specific Needs	Expected Results	D & E & C Measures
<p>Specific Need: Diversity of data sources, data models, data formats and information systems make it difficult to integrate, pool and use the health-related data for bringing improvements in health care delivery and policy making</p> <p>Specific Need: The post-cancer treatment phase in young persons' life pose specific challenges (e.g. treatment adherence, medical complications, low morale, social segregation etc.). Addressing such challenges require</p> <ol style="list-style-type: none"> Empowerment of patients through provisioning of timely information about health conditions, key risks, expert recommendations, alerts, interventions etc. Dynamic decision support to manage changing health (including medical, mental, social) conditions in an efficient and user-friendly way Close engagement with different actors to discuss issues with regards to getting back to the new normal life, gather feedback related to health conditions, guidance on lifestyle choices, managing health etc. <p>Specific Need: Decision support system in the healthcare domain should be more dynamic/adaptive, interoperable, reusable and accessible through different platforms</p> <p>Specific Need: Effective planning and orchestration of different activities in cancer treatment requires access to interoperable and integrated data, multi-stakeholder interactions and evidence-based decision support</p> <p>Specific Need: Health related decision and policy making process can be made more transparent and trustworthy through FAIR and explainable data analytic techniques</p> <p>Specific Need: Health related policies need to be frequently assessed and refined through societal engagement and evidence-based decision support mechanisms to keep them fresh/effective</p>	<p>Expected Result: Standardised data modelling, integration, storage and utilisation techniques</p> <p>Expected Result: Big data platform with open interfaces to nurture and support an ecosystem of health data-centric applications</p> <p>Expected Result: AI-based data analysis and modelling techniques/algorithms capable of extracting meaningful information and making predictions from the analysis of integrated data</p> <p>Expected Result: Frugal AI algorithms capable of processing real-time data, using explainable techniques, to aid the design and delivery of relevant recommendations to different actors</p> <p>Expected Result: Mobile and wearable applications capable of establishing close engagements, frequent interactions, information exchange and dialogues between different actors</p> <p>Expected Result: Dynamic decision support system that uses AI analytic and expert system techniques to empower and help different actors in the healthcare domain</p> <p>Expected Result: Adaptive dialogue models that use AI techniques and personalised interfaces for carefully choreographed interactions between different actors based on their needs, values, goals</p> <p>Expected Result: Social analysis tool to support the assessment of existing and design of new policies based on evidence-based decision support</p> <p>Expected Result: Publications of project findings</p>	<p>Dissemination:</p> <ul style="list-style-type: none"> Promotion of project outcomes on web and social media Organisation of innovation co-design workshops with users Design of project promotion material e.g. flyers, banner etc. Publications of scientific results in reputed venues Participation in industrial exhibitions to showcase results Partner specific dissemination in local communities e.g. publishing and events at hospital, chamber of commerce etc. Contribution to standardisation on health data integration and use <p>Exploitation:</p> <ul style="list-style-type: none"> Joint exploitation through partner consultations Exploitation of individual or partner specific outcomes <ul style="list-style-type: none"> AI models for risk assessment and key factor analysis Big data platform for the integrated healthcare Mobile and wearable applications AI-based dynamic decision support system Adaptive dialogue models and implementations Social analyser for societal analysis and policy support <p>Communication:</p> <ul style="list-style-type: none"> Customised communication towards all relevant actors Key activities <ul style="list-style-type: none"> Project branding - design of promotion material Publications key findings in conferences and journals Demonstration of project outcomes in events Promotion in networking and demonstration events Web and social media coverage of project activities Project news and newsletter to promote progress Clustering and joint activities with other projects

Target Groups	Outcomes	Impacts
<p>Cancer patients in the post-treatment phase of their life towards new normal life</p> <p>Clinical experts dealing with cancer patients, including doctors, nurses, technicians etc.</p> <p>Caregivers to the young cancer patients including parents, carers, teachers etc.</p> <p>Policy and key decision makers in the healthcare domain – particularly related to cancer research, treatment and care programs</p> <p>ICT solution providers who are interested in developing and validating new technology solutions in the eHealth and healthcare domain</p> <p>System or platform solution providers and integrators who are interested in developing or integrating new technologies in the healthcare domain</p> <p>Data scientists, AI and ICT researchers who are interested in developing new data-centric solutions and validation of existing approaches in new application scenarios</p> <p>Medical, epidemiology and social science researchers and scientific community who is interested in the development of new research programs, validation of research, knowledge exchange and generating new knowledge through collaborations</p>	<p>Empowerment of cancer patients with timely advice, feedback and recommendations on managing their health conditions and wellbeing.</p> <ul style="list-style-type: none"> >=80% participants in the pilots report positive improvements in QoL, based on availability of relevant and timely information through PostCare (KPI3) <p>Increased use & reuse of integrated health data to develop, monitor and evaluate critical decisions.</p> <ul style="list-style-type: none"> >=90% of clinical experts reporting better access to integrated health information and increased decision-making efficiency for Cancer research (KPI1 and KPI2) <p>Increased stakeholder engagements based on the use of mobile and wearable devices that are capable of gathering data and facilitating timely interactions between relevant actors.</p> <ul style="list-style-type: none"> >=50% increased interaction between different actors and use of personalised parameters in the decision support process (KPI5) <p>Efficient decision and policy support through the use of advance AI expert system techniques, involving relevant actors in the design of recommendation and delivery decision support through personalised interfaces and technologies.</p> <ul style="list-style-type: none"> >=90% satisfaction of DSS users and design of >5 policies through evidence-based decision support (KPI7 and KPI8) <p>Increased awareness of data-centric solutions in the healthcare domain will be ensured through the organisation of pilot activities involving large number of different types of actors</p> <ul style="list-style-type: none"> >1200 participants take part in pilot activities to test and validate results in >4 pilot countries 	<p>Ease of access, use and reuse of heterogeneous health data</p> <p>Scientific: Increased opportunities for the development of novel data-driven approaches in healthcare delivery and policy-making</p> <p>Economical/Technological: Enhancements in existing and development of new healthcare applications and systems, leading to increased economic activity in the ICT and health domains</p> <p>Societal: Availability of innovative data-centric solutions will empower citizens and cancer patients to make informed health care decisions and bring improvements in their QoL.</p> <p>Evidence-based decision support in the healthcare domain</p> <p>Scientific: New dynamic decision support solution for personalised healthcare based on advance AI techniques</p> <p>Economical/Technological: New market for healthcare applications for the mobile and wearable platforms, capable of providing real-time dynamic decision support</p> <p>Societal: 50% reduction in the time spent by healthcare resources on providing support (advise, recommendations etc.) to cancer patients. Automated (AI-based) solution can spare vital resources</p> <p>Efficient healthcare policy assessment and design</p> <p>Scientific: A holistic approach for analysing the impact of healthcare policies through analysis of integrated health data, healthcare interventions, social/societal trends and evidence-based decision support</p> <p>Economical/Technological: New technology solution to support policy making processes based on the analysis of integrated data from multiple sources, resulting in timely assessments and interventions in the healthcare policies</p> <p>Societal: More agile policy making process will tune the healthcare policies to public health needs, resulting in saving time, costs (and lives) in the public health domain</p> <p>Enhanced role of citizens in healthcare decision making</p> <p>Scientific: Novel co-creation and multi-actor engagement approach for design of healthcare solutions and policies</p> <p>Economical/Technological: Reduced time to get vital input</p> <p>Societal: Culture of open dialogue & trust in healthcare services</p>

Final Remarks for the Impact Canvas

Bu proje Avrupa Birliği ve Türkiye Cumhuriyeti tarafından finanse edilmektedir
This project is co-funded by the European Union and the Republic of Türkiye

- Needs hands-on practice
- Don't forget: practice makes the master!
- Ideal: to be composed with interaction amongst partners
- Also: ***it needs time*** – it is not wise to leave for the last moment
- Even better: Consider to ***start your proposal from this section*** and then build and elaborate on the other parts!

Conclusion

How Evaluation Works?

The evaluation timeline

Bu proje Avrupa Birliği ve Türkiye Cumhuriyeti tarafından finanse edilmektedir
This project is co-funded by the European Union and the Republic of Türkiye

Award Criteria

EXCELLENCE

- ✓ Clarity and pertinence of the **project's objectives**, and the extent to which the proposed work is **ambitious**, and goes beyond the state-of-the-art.
- ✓ Soundness of the **methodology**, including the underlying concepts, models, assumptions, **interdisciplinary** approaches, appropriate consideration of the **gender dimension** in research and innovation content, and the quality of **open science practices** including sharing and management of research outputs and engagement of citizens, civil society and end users where appropriate.

Bu proje Avrupa Birliği ve Türkiye Cumhuriyeti tarafından finanse edilmektedir
This project is co-funded by the European Union and the Republic of Türkiye

IMPACT

- ✓ Credibility of the **pathways** to achieve the expected **outcomes and impacts** specified, and the likely **scale** and **significance** of the contributions due to the project.
- ✓ Suitability and quality of the **measures to maximize expected outcomes and impacts**,

How Proposals are being Evaluated

QUALITY AND EFFICIENCY OF THE IMPLEMENTATION

- ✓ Quality and effectiveness of the **work plan**, assessment of **risks**, & appropriateness of the effort assigned to work packages, and the **resources** overall.
- ✓ Capacity and role of each **participant**, and extent to which the **consortium** as a whole brings together the necessary expertise.

Bu proje Avrupa Birliği ve Türkiye Cumhuriyeti tarafından finanse edilmektedir
This project is co-funded by the European Union and the Republic of Türkiye

Food for thought and Q&A

- Do you enjoy writing research/innovation project proposals?
- What part of it do you enjoy most?
- How often do you cross your comfort zone?
- What are your weaknesses when it comes to HE proposal preparation?
- How can you overcome such weaknesses and enhance your chances for a winning proposal?

Bu proje Avrupa Birliđi ve Türkiye Cumhuriyeti tarafından finanse edilmektedir
This project is co-funded by the European Union and the Republic of Türkiye

Dimitris D Papageorgiou
dimpapageorg@gmail.com

Teşekkür ederim!

Thank you!
